

1. Explain oops concepts by giving real time example?
2. Explain class and instance by giving real time example?
3. What is the neee of getter and setter method?
4. What is the difference between association and inheritance?
5. What do you know about super in java?
6. Why Java do not support multiple inheritance?
7. Which are the rules of method overriding?
8. What is the difference between overloading and overriding?
9. Which methods are not allowed to override in sub class?
10. What is dynamic method dispatch?
11. What is upcasting? What is the advantage of it?
12. What is downcasting? What is the need of it?
13. What do you know about instanceof operator
14. What is the difference between operator== and equals method?
15. What is abstract class? Why we can not instantiate it?
16. What do you know about final method and final class?
17. What do you know about polymorphism? How

can we achieve it?

18. Explain explain class hierarchy?
19. What is the difference between error and exception?
20. What is the difference between checked and unchecked exception?
21. What is the difference between throw and throws?
22. What do you know about finally block?
23. What do you know about try with resource?
24. In which case, JVM do not execute finally block?
25. What do you mean by exception propagation?
26. What is exception Channing?
27. What is the need of user defined exception?
28. How can we pass argument to the method by refrence?
